

Computer Aided Design (CAD) Operator - Fort Worth, TX

CTC, Inc. is looking to add a Computer Aided Design (CAD) Operator to our growing team. If you are interested in the position, please submit resume to careers@ctcinc.com.

Our company, headquartered in Fort Worth, Texas, provides railroad systems design and review, training, and quiet-zone planning and implementation throughout the United States. We specialize particularly in highway-rail grade crossings interconnected with traffic signal systems, overseeing preemption highway-rail grade-crossing projects nationally for railroad, transit, and public agency clients. We also provide rail communication and signaling systems engineering, including railroad signal design, construction and maintenance.

Our firm personnel are nationally recognized and have helped develop industry standards for preemption, serving on numerous national committees and working groups to develop new standards and recommended practices for preempted traffic signals. For more information about CTC, please visit our website at www.ctcinc.com.
